INTRODUCTION

2020 Overview

The General Social Survey (GSS), a national representative survey of the attitudes and behaviors of adults in the United States, has taken place annually or biennially since 1972.

Due to the onset of the **COVID-19 pandemic** in the United States in the early months of 2020, GSS staff redesigned the 2020 GSS in several ways to ensure the safety and wellbeing of all people who participate in and administer the study.

In the year of 2020, **we conducted the GSS as two studies**; namely, (1) a **panel** re-interview of past respondents from the 2016 and 2018 cross sectional GSS studies (referred to as the 2016-2020 GSS Panel), and (2) an independent fresh **cross-sectional** address-based sampling push to web study (referred to as 2020 cross-sectional survey). **This codebook provides details of the first study; namely, the study empanelling former 2016 and 2018 GSS respondents to answer a GSS questionnaire in 2020** (i.e., the 2016-2020 GSS panel). Documentation for the second study (**cross-sectional study**) will be provided separately. GSS staff redesigned both the **panel** and the **cross-section** study in **2020 to be administered primarily via web self-administered questionnaire**, instead of face-to-face interviews, with phone interviews as a secondary mode. In this codebook, the 2020 follow-up survey of 2016 or 2018 GSS cases is referred to as the 2016-2020 GSS Panel **Wave 2** (where Wave 1 is the pool of GSS respondents who participated in either the 2016 or 2018 GSS cross sectional surveys).

Each of these major changes had several ramifications for sampling, fielding, questionnaire design, data cleaning, response rates, and weights.

Panel Overview

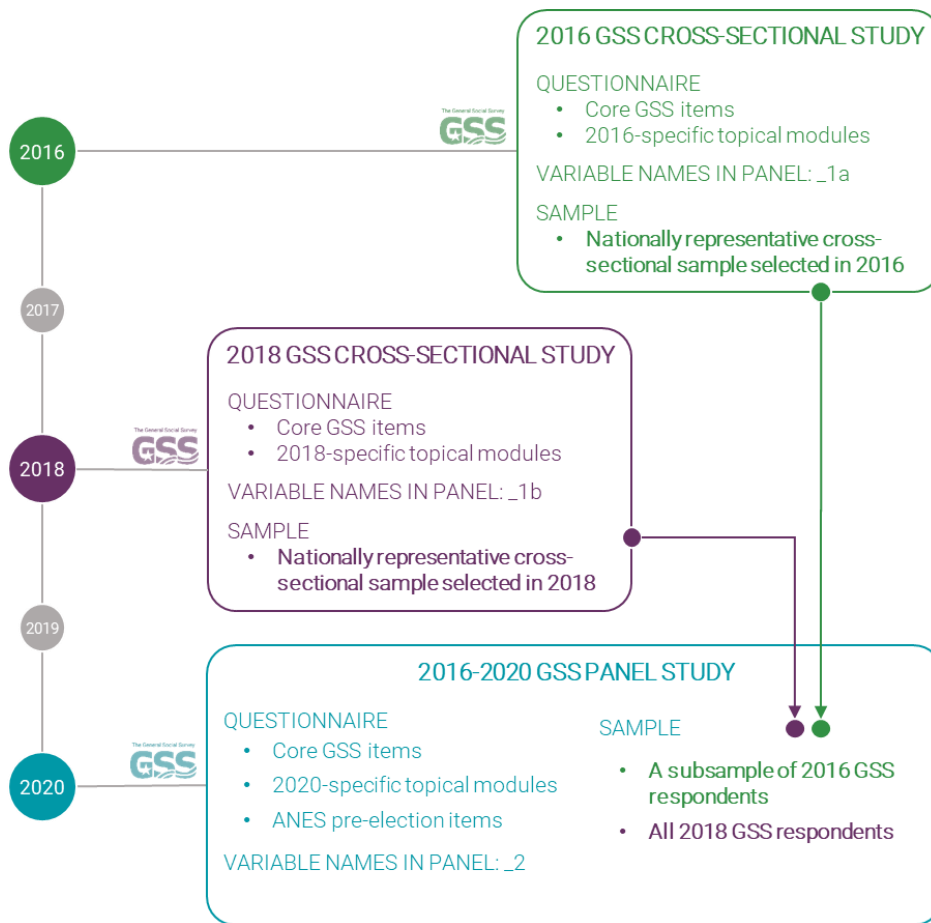

This codebook focuses on Wave 2 of the 2016-2020 GSS Panel – i.e. the panel reinterviews with 2018 GSS respondents and a randomly selected subset of 2016 GSS respondents. The GSS has used a panel format previously, as parts of the 2006-2014 GSS. The codebook for those panels is available [here](#).

In the 2016-2020 GSS Panel, variables only contain data from one of the three years. To differentiate between versions of each variable, they have been appended with suffixes. Variables from 2016 (Wave 1a) have **_1a** appended, variables from 2018 (Wave 1b) have **_1b** appended, and variables from 2020 (Wave 2) have **_2** appended. Users can also track cases from 2016 and 2018, and reinterviews from 2020 with the variable SAMPTYPE. Figure 1 shows the relationship of 2016, 2018, and 2020 rounds of data collection for the 2016-2020 GSS Panel.

Wave 1 – First Interview	_1a variables contain data from the 2016 GSS _1b variables contain data from the 2018 GSS
Wave 2 – Follow-up Interview	_2 variables contain data from the 2020 GSS reinterviews

Figure 1: Configuration of 2016-2020 GSS Panel

The 2016 to 2020 GSS Panel Wave 2 interviews included no new respondents—meaning that GSS staff convened the panel in response to the COVID-19 pandemic. Therefore, the 2016 to 2020 GSS Panel represents an **ad hoc panel in which respondents from previous rounds (2016 and 2018) were contacted to be administered a questionnaire relevant for 2020**. Some of those questions come from the American National Election Studies (ANES) –this is the first time the GSS and ANES have formally collaborated to include ANES questions into a GSS questionnaire. Respondents were located based on prior round contact information, and invited to complete a shortened version of the traditional GSS questionnaire (see [Major Changes to the GSS in 2020](#) for details), either via web-based self-administered interview or phone interview with a trained interviewer using a computer-assisted telephone interviewing (CATI) system. Eligible respondents, based on citizenship status, also received a module for the GSS-ANES collaboration (see [GSS-ANES Collaboration](#)), and those who completed that module were later invited to complete the post-election 2020 ANES questionnaire. Table 1 lists key aspects of the 2016-2020 GSS Panel Wave 2.

Table 1. Key Aspects of the 2016-2020 GSS Panel

KEY ASPECTS	2016-2020 GSS Panel Wave 2
Sample	Respondents interviewed in 2018 and 2016
Invitation	Mailing materials that show a web link to invite people to participate on the web (i.e., pushing respondent to a web survey first). Phone option was also provided.
Survey mode	Web Phone
Incentive	Both non-contingent pre-paid incentive and contingent post-paid incentive
Initial sample size	2,348 (100% of respondents from 2018) and 2,146 (74.85% of respondents from 2016) for a total of 4,494
Retention rate	A total of 1,823 cases were interviewed as panel cases in 2020. The weighted 2016-2020 GSS Panel Wave 2 retention rates were 44.9% for the 2018 GSS cross-sectional respondents, 38.8% for the 2016 GSS cross-sectional respondents, and 40.4% overall for the entire Wave 2 panel sample. Full details can be found in Response Rates .
Fielding period	8/24/2020 → 9/26/2020
Administration	Adaptive design combining frame and previous response data was used during the data collection period to target cases to ensure representativeness of the panel data.
Respondent selection within household	Same respondents from the previous survey (either 2016 or 2018).
ANES	All respondents who completed the ANES module, identified themselves as U.S. citizens, and who could be located within US voting districts were delivered to ANES for inclusion in the ANES post-election survey. See GSS-ANES Collaboration for more information.
Language	English and Spanish
Paradata derived from instrument	Paradata were recorded, but are not available in release 1. Paradata is expected in release 2.
Paradata derived from interviewer	Paradata were recorded for phone cases only but are not available in release 1. Paradata is expected in release 2.
Respondent assignment to GSS questionnaire.	GSS 2016-2020 Wave 2 panelists retained the same ballot (i.e., A, B or C) and form (i.e., X or Y) as in previous rounds (2016 or 2018).

MAJOR CHANGES TO THE GSS IN 2020

Two sets of changes occurred for the 2016-2020 GSS Panel Wave 2, compared with previous GSS cross-section studies. The first set of changes relates to **shifts in the mode of data collection**, while the second set relates to **shifts directed towards a panel survey methodology**. This section explains each set of changes in detail.

Changes Related to Mode of Data Collection

Due to the shift from a face-to-face to a web-based questionnaire, GSS staff modified many survey questions in the 2016-2020 GSS Panel Wave 2 for the web instrument. However, the telephone instrument kept the same wording as the face to face original wording. The web survey changes can come in many different forms, but follow a few distinct operating principles.

The changes are intended to:

- **Remove conversational language** in wording where it was no longer appropriate (e.g. using a more neutral “we” in the place of “I” and “me” referring to the interviewer”)
- **Standardize terminology** where interviewers had chosen options as they saw fit (e.g., switching from “Blacks/African Americans” in the question stem to “Blacks” or “Black people,” depending on the question).
- Reword questions for items in which interviewers could **select appropriate language** according to information that they could observe but that was not yet recorded in the interview (e.g., reworking questions which used the term husband/wife prior to asking about the sex of the respondent’s partner).
- Reword questions for items in which interviewers asked respondents **open-ended questions**, but entered the responses in a combination of open-ended and closed-ended items. These changes are mostly confined to Religion and Occupation/Industry.

Full questionnaires for the 2016-2020 GSS Panel Wave 2, as well as all other rounds of the GSS, are available at: <https://gss.norc.org/get-documentation/questionnaires>.

Don’t Know and No Answer Responses

Beyond these general changes, three specific changes are particularly important. **The first, and largest, is how the 2016-2020 GSS Panel Wave 2 web mode handles “Don’t Know” and “No Answer” responses.** Generally, in previous GSS surveys, interviewers would not show “Don’t Know” and “No Answer” response options to respondents on hand card, or read those options to respondents. However, interviewers could always use “Don’t know” or “No answer if a respondent did not wish to answer a question. In keeping with this spirit, the 2016-2020 GSS Panel Wave 2 web mode made the following modifications for self-administration:

-
- Removed all “No Answer” response options (instead relying on respondents to skip questions they did not wish to answer)
 - Removed all “Don’t Know” response options for attitudinal questions.
 - Displayed “Don’t Know” response options in light-grey text, separated from standard responses, on all factual questions.
-

For all data collected via the web self-administered questionnaire mode, the 2016-2020 GSS Panel Wave 2 uses “Skipped on Web” when a respondent skipped a question. These responses are separated from “No Answer”, which can only appear for cases in the phone mode in wave 2. Appendix A shows tabulations and response categories used in items across both waves of the 2016-2020 GSS Panel.

The 2016-2020 GSS Panel uses standardized reserved codes in Release 1, and as a result, all “Can’t Choose” labels have been replaced with “Don’t Know” labels.

Volunteered Responses

The second adaptation from face-to face to a web survey involved **GSS Replicating Core items which frequently received volunteered responses**; such as “About Right” to the item COURTS (“In general, do you think the courts in this area deal too harshly or not harshly enough with criminals?”). Traditionally, interviewers could mark volunteered responses as valid answers, given the frequency at which they occurred.

The web mode cannot capture volunteered responses, only responses which are shown on the screen. As a result, these response options were completely removed from the web mode for the 2016-2020 GSS Panel Wave 2. The phone mode still contains volunteered responses, due to the presence of interviewers.

There is an **experiment** in the 2020 GSS Cross-section that tests the effects of this change (volunteered vs. not volunteered responses options). Data from the Cross-section is expected later in 2021 and will be documented as part of the 2020 GSS Cross-sectional study. For experiments conducted in the GSS 2016-2020 Panel only please see [New Experiments in 2016-2020 GSS Panel Wave 2](#).

SEX

The third change was the revision of the variable SEX. **In face-to-face interviews, interviewers traditionally coded SEX based on observation. In the web mode, SEX was asked explicitly of respondents.** Sex and gender identity are collected as two separate items: Sex recorded at birth (SEXBIRTH1) and current gender identity (SEXNOW1). In the past, these items have only been asked to 2/3rds of respondents (i.e., two ballots), on a self-administered topical module. Beginning with the 2020 GSS (both the 2016-2020 GSS Panel Wave 2 and the 2020 GSS Cross-section), SEXBIRTH1 and SEXNOW1 are asked of all respondents. For the purpose of backward compatibility, the panel dataset contains SEX_2, which uses the traditional binary coding scheme, and is based on recoding both SEXBIRTH1 and SEXNOW1.

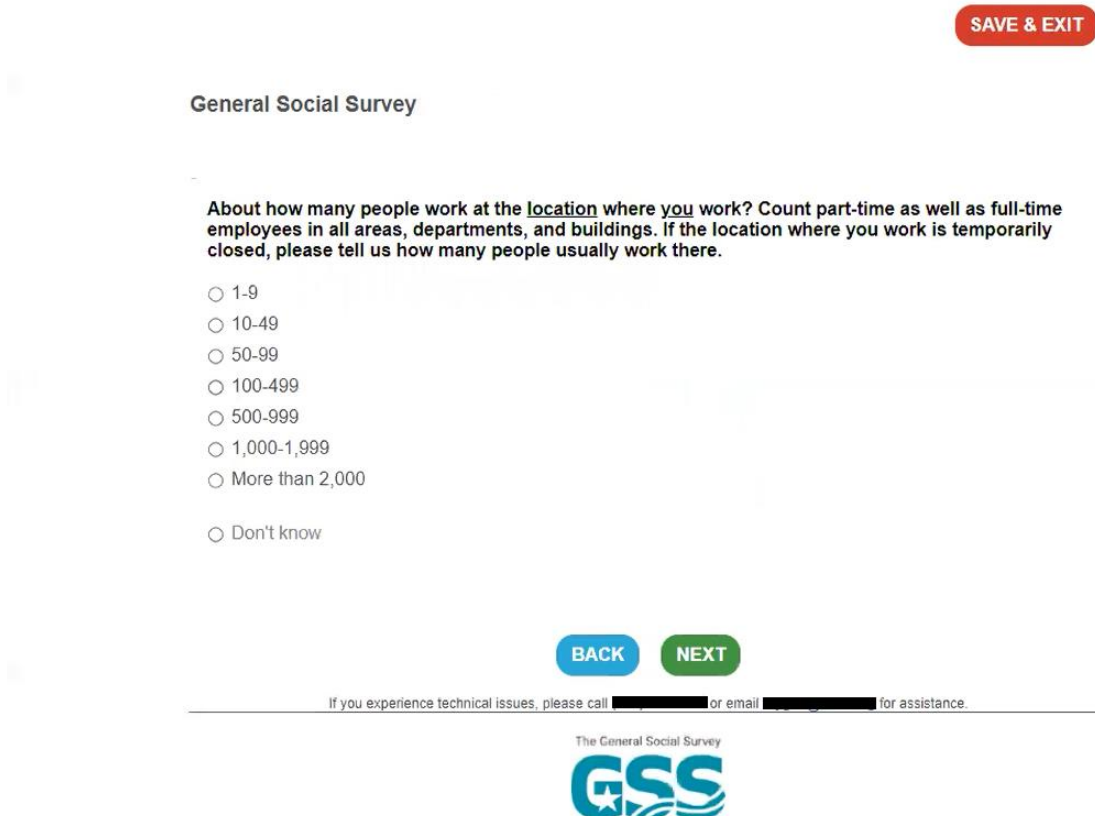

Optimization of Items for Web Mode

GSS staff have made many other small changes to accommodate the web mode, including changing how items were presented to respondents visually by including buttons and colors for navigation, revising the sequence of certain items, and adjusting the response options for others. Users are encouraged to compare wordings of either the 2016 or 2018 version. In addition, the full questionnaire was optimized for the most common web and smartphone browsers (Chrome, Safari, Firefox, Internet Explorer, Edge, and Opera), as well as various device types (desktop, laptop, tablet, smartphone). These changes, along with the rewording changes, should not substantially affect how respondents answer questions, and were mostly meant to minimize “Don’t Know” and “No Answer” responses. For a full account of all changes, please compare questionnaire documentation of the 2016-2020 GSS Panel Wave 2 to corresponding questionnaire documentation for the 2016-2020 GSS Panel Wave 1.

Screenshots of changes

The 2016-2020 GSS Panel Wave 2 comprised primarily a self-administered web questionnaire. The following typical item from this questionnaire displays both the typical layout of a self-administered web questionnaire item and the change to Don’t Know response options discussed in [Don’t Know and No Answer Responses](#).

Figure 2: Visual display of a survey question in the 2016-2020 GSS Panel Wave 2

Changes Related to Shifts to Panel Survey Methodology

Because the 2016-2020 GSS Panel Wave 2 was mainly conducted as a web-based panel, and that the content (and thus length) of the GSS had increased over the last decade, GSS staff revised the GSS Replicating Core for the 2016-2020 GSS Panel Wave 2 to reduce the length of the interview. **For the 2016-2020 GSS Panel Wave 2 survey instrument, questions whose responses were deemed not to change over time were omitted. These are labeled as “time-invariant” items.** These are questions about the respondents’ parents, about family structure while growing up, and about several demographic items such as race and ethnicity. Additional variables were removed due to concerns regarding mode or lack of use—e.g. items related to vocational education – and will not be included on the 2020 GSS Cross-section. The following is a full list of variables that are not available in the 2016-2020 GSS Panel Wave 2, but that will return on future surveys:

TIME INVARIANT ITEMS

Parental information:

PAEDUC, PADEG, MAEDUC, MADEG, PAWRKSLF, PAWRKSLFFAM, PAOCC10, PAIND10, MAWRKGRW, MAWRKSLF2, MAWRKSLFFAM, MAOCC10, MAIND10

Information about childhood:

BORN, INCOM15, FAMILY16, FAMDIF16, SIBS, REG16, RES16, MOBILE16, DWELOWN16, RELIG16, DENOM16, OTH16, JEW16, FND16

Family background:

PARBORN, GRANBORN

Race:

RACE, RACECEN1, RACECEN2, RACECEN3

Ethnicity:

ETHNIC, ETH1, ETH2, ETH3, HISPANIC

Veteran Status:

VETYEARS

NON-TIME INVARIANT ITEMS

Education:

MAJOR1, MAJOR2

All omitted variables are still present in the 2016-2020 GSS Panel data, but only from the first wave of the panel (either 2016 or 2018, depending on the respondent). Users can track the first year of the panel (either 2016 or 2018) for each respondent, using variable SAMPTYPE.

Changes in Occupation and Industry

Prior rounds of the GSS have relied on NORC staff to code open-ended responses to occupation and industry questions. Beginning with the 2016-2020 GSS Panel Wave 2, the National Processing Center of the U.S. Census Bureau will code occupation and industry responses. Although ordinarily this would not be a major change, it is notable for 2020 because of changes in panel data. **The GSS does not separate person-level change for**

occupations from coder-related changes, especially as respondents may have provided less detailed responses online than in face-to-face interviews. Please note that when occupation or industry codes are similar, but not identical, to previous round codes, this may or may not represent true person-level change.

DATA FILE STRUCTURE

In addition to the panel re-interviews, the 2016-2020 GSS Panel data file contains all information from the 2016 and 2018 GSS. With a few exceptions, variables exist for each year and are distinguished by the variable name suffix (e.g., WRKSTAT_1a, WRKSTAT_1b, WRKSTAT_2). Please see section, [How to Read GSS Codebook Tables](#), for further detail. Respondents who were not re-interviewed in 2020 are still included in their original year, as are the variables in topical modules that were asked in only one year and not replicated elsewhere.

Two variables have been included to help describe the sample of the 2020 GSS Panel. The first, SAMPTYPE, allows users to differentiate between respondents first interviewed in 2016 and those first interviewed in 2018. The second, PANSTAT, allows users to track whether respondents were re-interviewed in 2020. Third, the case ID number found in YEARID can also be used to identify the original year and ID number.

Table 2 provides a full breakdown of PANSTAT.

Table 2. Panel Status for all Respondents to Wave 1 of the GSS 2016-2020 Panel

Panel Cases Status (PANSTAT)	2016	2018	Total
Selected, eligible, and re-interviewed	809	1,014	1,823
Not selected	721	0	721
Selected, but not re-interviewed	1,261	1,267	2,528
Selected, but not eligible and not re-interviewed because R was deceased	61	45	106
Selected, but not eligible and not re-interviewed because R was permanently incapacitated, outside the U.S., or otherwise out of scope	15	22	37
Total	2,867	2,348	5,215

Two variables have been included for weighting purposes: 1) WTSSALL_2 accounts for the original probability of selection in 2016 or 2018, household size, and subsampling design. 2) WTSSNR_2 also includes an additional adjustment for nonresponse at the National Frame Area (NFA) level, giving more weight to respondents who are in NFAs with lower response rates. Please see section [Weights](#) for details. **The GSS staff recommends using WTSSNR_2 as the standard weight for data analysis in the 2016-2020 GSS Panel Wave 2.**

Table 3 provides a preview of the data file structure.

Table 3. Data File Structure

FILEVERSION	PANSTAT	WTSSALL_2	WTSSNR_2	VSTRAT_2	VPSU_2	WRKSTAT_1A	WRKSTAT_1B	WRKSTAT_2
GSS 2020 Panel Release 1 (May 2021)	Selected, eligible, and reinterviewed	1.4318711	1.3578916	3201	1	Working full time	Inapplicable (IAP)	Working full time
GSS 2020 Panel Release 1 (May 2021)	Selected, eligible, and reinterviewed	0.7159355	0.6740571	3201	1	Working full time	IAP	Working part time

GSS 2020 Panel Release 1 (May 2021)	Selected, eligible, and reinterviewed	0.9738958	0.9339024	3301	1	IAP	Working full time	Working full time

New Reserve Codes

The 2016-2020 GSS Panel now uses a standardized set of reserve codes for all variables:

.d – Don't know (DK). This reserve code is used when respondents indicate that they do not know the answer to a question.

.i – Inapplicable (IAP). This reserve code is used when a respondent does not see a question, either due to structural factors (e.g. for a respondent on BALLOT C, they will be marked inapplicable for a question exclusive to BALLOTS A and B), or to personal factors (e.g. a respondent who is not married will be marked inapplicable for a spouse-related item).

.n – No Answer (NA). This reserve code is used when a respondent refuses to answer a question. In 2020, this code is exclusive to phone mode cases. If a respondent gives a "No Answer" response to a screener question, all follow-up questions are marked as "No Answer."

.s – Skipped on Web. This reserve code is used when a respondent skips a question in the web mode. If a respondent skips a screener question, follow-up questions are marked as "Skipped on Web."

.y – Not available for this year. In previous rounds of the GSS, .i would be used to mark variables which were not asked in that round. However, this led to confusion, as it meant that .i could be used for three separate meanings. For the 2020 GSS panel, **_1a** variables can be assigned .y to indicate that they were not asked in 2016 (e.g. COVID-related items), **_1b** variables can be assigned .y to indicate that they were not asked in 2018 (e.g. COVID-related items), and **_2** variables can be assigned .y to indicate that they were not asked in 2020 (e.g. items related to the 2018 International Social Survey Program (ISSP) topical module on religion).

.x – Not available in this release. Variables that were asked in the 2016-2020 GSS Panel Wave 2, but have proven difficult to clean (mostly due to mode changes) have been omitted from the first data release. Instead of dropping the variable entirely, all cases are marked with .x, indicating that the data will be made available in a subsequent release.

Figure 3: Module Layout for 2016-2020 GSS Panel (Cont'd)

Form Color Legend									
	IAP	X	Y	XY					
MODULE	YEAR & BALLOT								
	2016			2018			2020		
	A	B	C	A	B	C	A	B	C
Spirituality									
GSS Board Topical Items									
Contact									
Interviewer Paradata									

The GSS includes slightly different wordings between web self-administered and phone interviewer-administered modes. All questionnaires are available in both English and Spanish. For the 2016-2020 GSS Panel Wave 2, this amounts to 12 different questionnaires: three ballots, two modes, two languages.

The questionnaires can be found <https://gss.norc.org/Get-Documentation/questionnaires>.

New Experiments in the 2016-2020 GSS Panel Wave 2

The 2016-2020 GSS Panel Wave 2 features two experiments in the Replicating Core that may alter long-term trends for core variables. The **first experiment**, discussed under [Changes Related to Mode of Data Collection](#), is the volunteered-responses experiment. The **second experiment** looks at gender-neutral wording for certain items on the GSS: those that refer to men as a default.

For all of these variables, the GSS includes a new version, which is identified with a “Y” at the end. For example, an item using gender-neutral wording displays “police officer” instead of a gendered “policeman.” Both sets of experimental variables should be compared to their nonexperimental versions that do not end in “Y” (e.g., LIBMIL vs. LIBMILY, FAIR vs. FAIRY). Each respondent sees only one version of the variable and is recorded as inapplicable on the other version, based on the variable FORM. For example, a respondent with FORM=Y answers SPKRACY and is marked .i on SPKRAC, the FORM=X version of the question.

Table 4 lists the variables affected by both of these experiments.

Table 4: Experiments and Variables

Gender Neutral Wording		
SPKATHY	SPKMILY	POLHITOKY
LIBATHY	LIBMILY	POLABUSEY
SPKRACY	SPKHOMOY	POLATTAKY
LIBRACY	LIBHOMOY	RACOPENY
SPKCOMY	SPKMSLMY	
COLCOMY	LIBMSLMY	
LIBCOMY	LETDIE1Y	
Volunteered Responses		
USWARY	DIVLAW	BIBLE
PRAYER	HELPFUL	POSTLIFE

COURTS	TRUST	KIDSSOL
FEPOL	FAIR	USCITZN
DISCAFFW	AGED	FUCITZN
RACOPEN	GRASS	
GETAHEAD	RELITEN	

GSS-ANES Collaboration

The 2016-2020 GSS Panel Wave 2 includes a collaboration between the General Social Survey (GSS) and the American National Election Studies (ANES). The 2016-2020 GSS Panel Wave 2 contained a module of items proposed by the ANES team, including attitudinal questions, feelings thermometers for presidential candidates, and plans for voting in the 2020 presidential election. After the 2020 Presidential election, eligible GSS panelists from the Wave 2 were administered a follow-up ANES questionnaire. Two criteria were considered for respondent eligibility: 1) U.S. citizenship and 2) location within U.S. voting districts. 1,734 GSS respondents met these two criteria and were contacted to complete the ANES post-election survey.

The ANES post-election survey was completed by 1,099 GSS respondents, with a further 65 partial cases, for a total of 1,164 cases. These respondents appear in both the ANES post-election study and the 2016-2020 GSS panel, with their 2020 GSS responses serving as their equivalent pre-election data. Researchers can link the relevant GSS Panel Wave 2 data with ANES post-election data using either ANESID (in the GSS Panel Wave 2 datafile) or V200001 in the ANES 2020 post-election datafile.

The ANES portion of the ANES-GSS 2020 Joint Study was fielded from 11/8/2020 to 1/4/2021. A total of 1,164 GSS respondents completed the modified version of the ANES post-election survey, with a further 65 partial cases, for a total of 1,164 cases, and a response rate of 63%. These respondents appear in both the ANES post-election study and the 2016-2020 GSS panel, with their 2020 GSS responses serving as their equivalent pre-election data.

Researchers can link the relevant GSS Panel Wave 2 data with ANES post-election data using either ANESID (in the GSS Panel Wave 2 datafile) or V200001 in the ANES 2020 post-election datafile. Weights are necessary to properly analyze the data. For the GSS, designs weights (WTSSALL/WTSSNR) should be used. For the ANES, weights are included in the ANES-2020 Joint Study Bridging File (a datafile containing the ANES-GSS 2020 Joint Study data, the ANES 2020 Time Series data, and weights for analyzing both parts of the 2020 ANES data); three weights include V200017b (for GSS cases alone), V200018b (Combined ANES-GSS, with post-election night adjustment), and V200019b (Combined ANES-GSS, without post-election night adjustment). More information on these weights and their design and methodology, are available in the ANES-GSS 2020 Joint Study User Guide and Codebook, available at electionstudies.org.

The full question text of the GSS Panel Wave 2 is available at <https://gss.norc.org/Get-Documentation/questionnaires>. The ANES module can be found in the 2020 panel questionnaires, labeled as section G, beginning with RATEINTRO. The full questionnaire text of the ANES 2020 Time Series post-election questionnaire can be found at electionstudies.org.

Table 5, below, shows overlapping items between the GSS Panel Wave 2 and the ANES 2020 Time Series Post-Election questionnaire. Both studies included items originating from the other. Users interested in comparing specific items, both across the two studies and across time for specific respondents may find this crosswalk useful.

Table 5: ANES/GSS Variable Crosswalk

GSS Variable Name	ANES Variable Name	Source	Question Text
ANESID	V200001	ANES	ANES 2020 case ID
RATEINCUMB	V201152	ANES	How would you rate Donald Trump
RATECHALL1	V201151	ANES	How would you rate Joe Biden
RATECHALL1	V201153	ANES	How would you rate Kamala Harris
APRVPRES1	V201127/V201128	ANES	Do you approve or disapprove of the way Donald Trump is handling his job as President?
LKELYVOT	V201100	ANES	How likely are you to vote in the November 2020 presidential election?
WHOVOTE1	V201033	ANES	In the November election for President, do you think you will probably vote for Donald Trump, Joe Biden, someone else, or will you probably not vote? ¹
ECONSTAT	V201324	ANES	What do you think about the state of the economy these days in the United States?
APRVDACA	V201421/V201422	ANES	And now thinking specifically about immigrants. Do you favor, oppose, or neither favor nor oppose allowing those who were brought to the U.S. illegally as children to remain here legally?
POLINTRST	V201006	ANES	Some people don't pay much attention to political campaigns. How about you?
COVOPEN	V201394/V201395	ANES	Do you think your state has moved too quickly, too slowly, or the right speed in relaxing "stay at home" orders and reopening businesses?
APRVECON	V201130/V021131	ANES	Do you approve or disapprove of the way Donald Trump is handling the economy?
APRVCOVID	V201142/V201143	ANES	Do you approve or disapprove of the way Donald Trump has handled the COVID-19 pandemic?
ECONLAST	V201325/V201326	ANES	Now thinking about the economy in the country as a whole, would you say that over

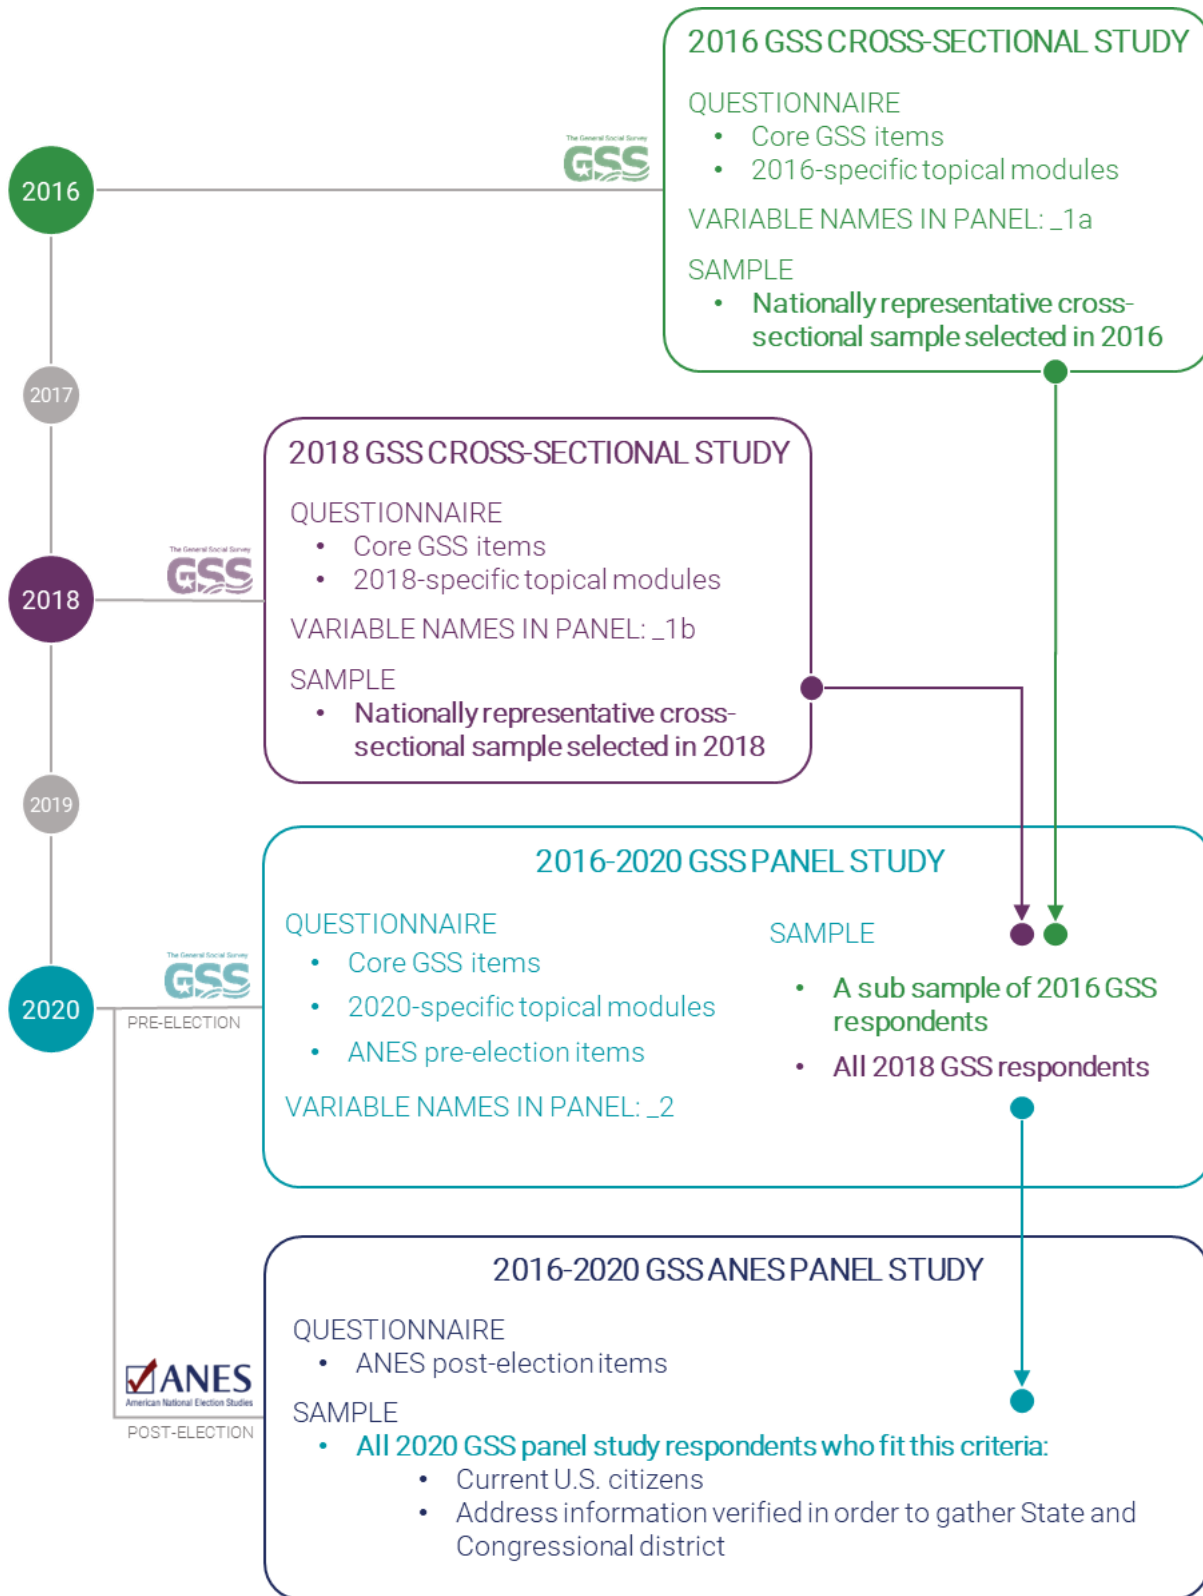

¹ This item has a slightly different wording on the ANES, which also includes the Libertarian and Green party candidates, and comes after the respondent has indicated that they intend to vote in the election: Who do you think you will vote for? [Joe Biden, Donald Trump/Donald Trump, Joe Biden], Jo Jorgensen, Howie Hawkins, or someone else?

			the past year the nation's economy has gotten better, stayed about the same, or gotten worse?

Figure 4, on the next page, shows the relationship between the 2016-2020 GSS Panel and the GSS-ANES collaboration.

Figure 4: Configuration of the 2016-2020 GSS Panel and 2016-2020 GSS-ANES Panel

Additional information:

The ANES-GSS 2020 Joint Study was a collaboration between the General Social Survey and the American National Election Studies. The ANES is a collaboration between the University of Michigan and Stanford University. For the ANES-GSS 2020 Joint Study, GSS data collection was conducted by NORC at the University of Chicago, and ANES data collection was conducted by Westat, Inc. At NORC, the GSS team wishes to thank Katy Aus and Joshua Borton for their work on the ANES-GSS 2020 Joint Study.

The GSS-ANES collaboration was supported by the National Science Foundation, Grant #1851332, which runs from 8/15/2019-7/31/2022.

To cite the merged ANES-GSS data from the ANES, please use the following:

American National Election Studies. 2022. ANES-GSS 2020 Joint Study [dataset and documentation]. April 8, 2022 version. www.electionstudies.org.

Future Releases

Future releases of the 2016-2020 GSS Panel will bring the contents of the 2016-2020 GSS Panel Wave 2 into line with the kind of data available in past cross-sectional releases, such as detailed religion codes and Household Enumeration Form (HEF) contents, as well as introduce additional content like enhanced weights. Release 2 of the 2016-2020 GSS Panel is expected later in 2021, although this is subject to revision. Modules, topics, and variables expected in future releases include:

- **Data corrections for two cases where BALLOT from Wave 1 does not align with BALLOT from Wave 2, and one case where FORM from Wave 1 does not align with FORM from Wave 2.**²
- The vocabulary item series WORDSUM
- “Can’t Choose” labels for ISSP items currently labeled “Don’t Know”, among other label changes
- Household Enumeration Form (HEF)
- Sex, age, and marital status for each person in the household
- Relationship of each person in the household to the head of household and their spouse/partner
- Identification of the respondent within the household roster
- Additional weights, including post-stratification weights and weights for refined attrition adjustments based on modeling
- Religious affiliation, denomination, fundamentalism of religion, and strength of religious affiliation for respondent and spouses or partners where available
- Paradata, including interviewer characteristics for CATI cases

² In 2016, two respondents had the incorrect BALLOT recorded, and one had the incorrect FORM due to an administrative error. As a result, their FORM and BALLOT assignments in 2016 and 2020 do not match.

GSS data releases now contain a version control variable: **FILEVERSION**. Version 1 of the 2016-2020 GSS Panel data was released on May 18, 2021, with FILEVERSION set to 1 for all cases. For Version 2, FILEVERSION will be set to 2.

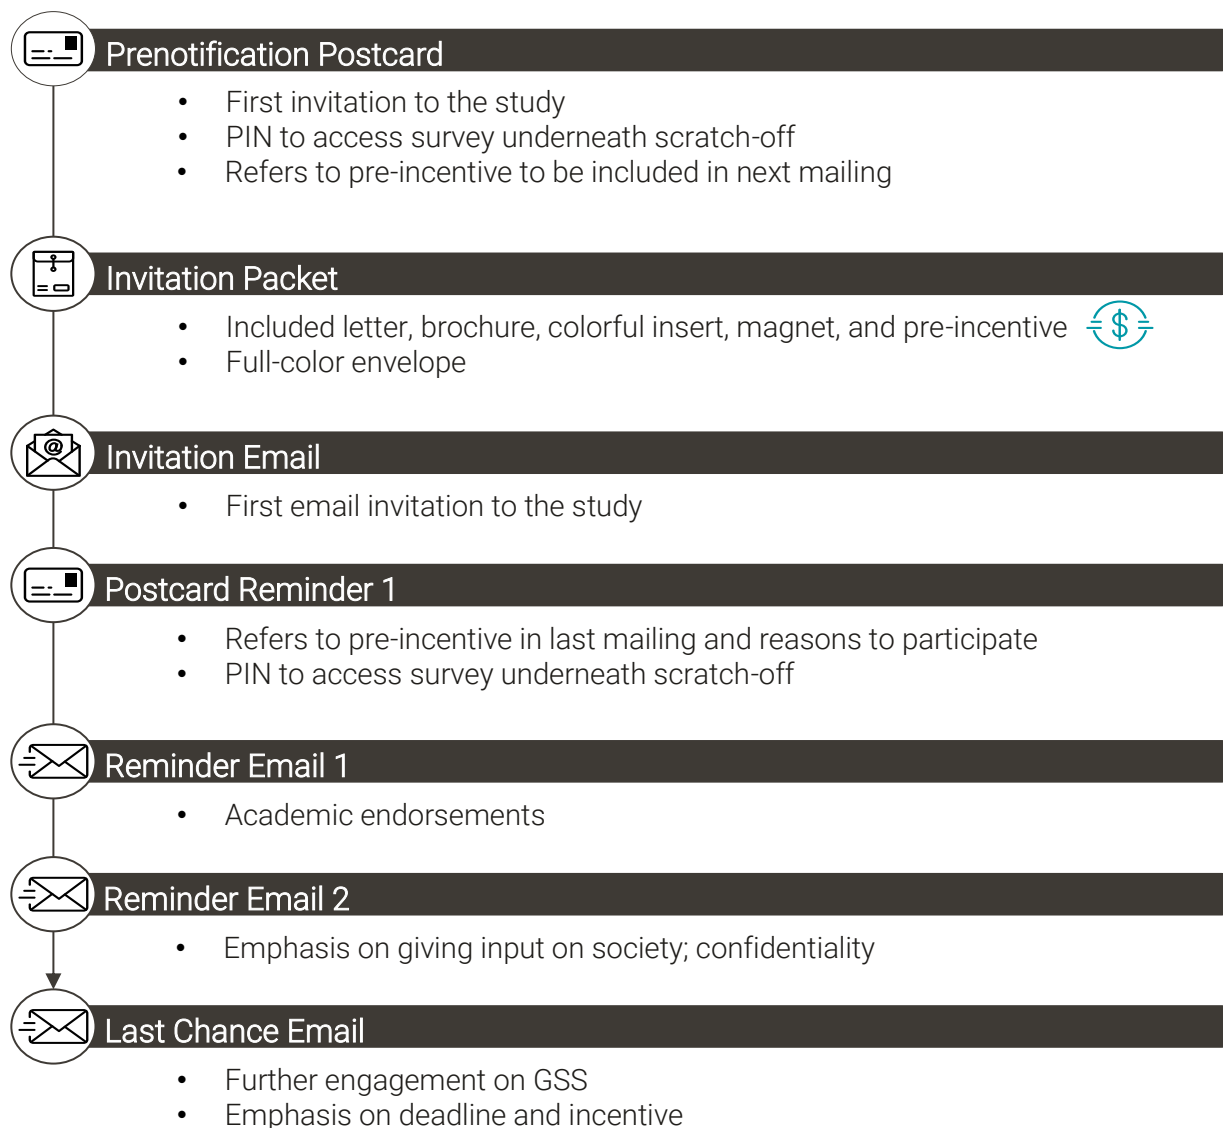

FIELDING

The 2016-2020 GSS Panel Wave 2 was conducted from August 24 to September 26, 2020, and was processed according to standard NORC procedures.

Because there was no in-person contact with respondents and all outreach to panel respondents took place via mail, email, and telephone, having the most accurate contact information for all panel respondents was critically important. Before data collection, the GSS staff compared **contact information from prior-round GSS interview data against existing public and commercial records** in two phases of locating: 1) batch locating to confirm old information and find new contact information, and 2) manual locating to confirm unconfirmed contact information with up to two rounds of search and verification.

GSS staff **redesigned outreach to respondents** for mostly mail-based outreach and tailored materials for each phase of data collection. Throughout the data collection period, panel respondents were mailed postcards and survey invitation packets and sent a series of emails urging them to complete the 2020 GSS survey. See Figure 5 for more details.

Figure 5: Recruitment Protocol for Mail

An experienced interviewer team conducted phone outreach to respondents to complete interviews by phone and/or prompt them to complete the web survey. To the extent possible, long-time GSS interviewers were assigned to contact the same respondents with whom they had completed GSS surveys in prior rounds.

From the start of fielding, panel respondents who had completed their prior-round interview in **Spanish** were assigned to bilingual interviewers and were mailed and emailed the Spanish versions of materials.

The 2016-2020 GSS Panel Wave 2 used R-indicators (Representativity Indicators from Schouten et al. 2009; Schouten, Peytchev & Wagner, 2018)³ to monitor overall representativeness of completed cases and to make operational adjustments to prioritize under-represented groups through real-time interventions.

Ultimately, 70.8 percent of respondents completed the GSS Panel survey via web survey, and 29.2 percent of respondents completed it by phone interview. The weighted 2020 Panel retention rate was 40.4 percent.

SAMPLE DESIGN

Sampling

The 2016 GSS Cross-Sectional Sample

To support a nationally representative sample, the GSS uses an area-probability sample of census tracts in urban areas and block groups in rural areas (these are second-stage sample units), and the addresses they contain, called the NORC National Sampling Frame. The NORC National Sampling Frame provides the basis for an equal-probability multistage cluster sample of housing units for the entire United States. Every decade, NORC reselects a National Sampling Frame based on the decennial census. The 2016 GSS was the third to use the 2010 NORC National Sampling Frame. First-stage units on the National Sampling Frame are called National Frame Areas, (NFAs), each of which comprises a Metropolitan Statistical Area (MSA) or one or more counties outside MSAs. The number of first-stage selections in the 2010 NORC National Sampling Frame is 126 NFAs, but GSS uses only 76 NFAs, which is half of the noncertainty first-stage selections. The 59 noncertainty NFAs in the GSS each represent 1 percent of the U.S. population, and the 17 certainty NFAs contain 41 percent of the U.S. population.

The second-stage selection yielded a sample of segments that are census tracts in urban areas (where U.S. Postal Service address lists are usually available), and segments that are block groups (smaller than census tracts) in rural areas where a physical listing is often required. The first-stage and second-stage units were selected with probabilities proportional to size (in housing units), and the sample housing units (third-stage units) were then selected to be an equal-probability sample, which resulted in approximately the same number of housing units selected per second-stage sampling unit. The number of second-stage selections in the 2010 NORC National Frame is 1,514, but GSS uses only 400, which is four per 1 percent of the U.S. population.

The 2016 GSS sample consisted of 6,200 housing units with an equal probability of selection (0.0000471825). For 67 of the 400 second-stage units, GSS staff located missed housing units and either subsampled or interviewed them using a half-open interval procedure. Only 18 missed housing units were added to the sample of 6,200 through this procedure.

The initial sample was larger than required so that 12 weeks into the field period, nonresponding households could be subsampled, resulting in a smaller number of more difficult cases needing to be interviewed (allowing greater concentration of effort). Approximately 60 percent of the cases eligible for subsampling were kept (weights were inflated for these cases to account for the subsampled-out cases), whereas 40 percent were subsampled out. The final number of completed interviews was 2,867.

The 2018 GSS Cross-Sectional Sample

The 2018 GSS was the fourth to use the 2010 NORC National Sampling Frame, and it used the same 400 segments as the 2016 GSS. The 2018 GSS sample comprised 5,200 housing units with an equal probability of selection (0.0000388289). Since the missed-housing-unit procedure adds so few cases and increases costs, 2018 GSS eliminated it.

The initial sample was again larger than required so that 10 weeks into the field period, nonresponding households could be subsampled, resulting in a smaller number of more difficult cases needing to be interviewed (allowing greater concentration of effort). Approximately 39.5 percent of the cases eligible for subsampling were kept (weights were inflated for these cases to account for the subsampled-out cases), whereas 60.5 percent were subsampled out. However, to increase the number of completed interviews, 300 of the subsampled-out cases were rereleased. The final number of completed interviews was 2,348.

The 2016-2020 GSS Panel Wave 2 Sample

The 2016-2020 GSS Panel Wave 2 consisted of re-interviews of respondents from the 2016 and 2018 Cross-Sectional GSS rounds. All 2,348 respondents from 2018 were fielded, but a random subsample of 2,146 out of 2,867 (74.85 percent) of the respondents from 2016 were released for the 2020 panel.

Just as for each cross-sectional round, two weights were created: WTSSNR_2 includes a nonresponse adjustment, whereas WTSSALL_2 does not have a nonresponse adjustment. In addition, WTSSNR_2 starts from the nonresponse adjusted weight WTSSNR_1a or WTSSNR_1b, whereas WTSSALL_2 starts from WTSSALL_1a or WTSSALL_1b, which does not have a nonresponse weight adjustment. Like the cross-sectional rounds, WTSSNR_2 uses an NFA-level nonresponse adjustment. For each NFA, we calculated the weighted response rate using the weight before nonresponse adjustment. The weight before nonresponse adjustment is divided by the NFA response rate to obtain the nonresponse-adjusted weight.

At the final step of weighting, GSS normalizes weights so that the sum of the weights is equal to the number of respondents. However, we believe analyses of the 2020 panel should be a 50 percent mix of each cohort (2016 and 2018). Therefore, the average normalized weight for the smaller cohort (there were 809 completes from 2016) will be slightly greater than the average normalized weight for the larger cohort (there were 1,014 completes from 2018). Each cohort has its weight multiplied by a constant so that the sum for each cohort is 911.5 (half of 1,823).

Retention Rates

The 2016-2020 GSS Panel Wave 2 attempted to re-interview all 2,348 GSS cross-sectional respondents from 2018 and a randomly selected subset of 2,146 (out of the original pool of 2,867) GSS cross-sectional respondents from 2016.

Therefore, the 2016-2020 GSS Panel Wave 2 response rate is more appropriately a retention rate of the 2016 and 2018 respondents. The 2016-2020 GSS Panel Wave 2 contains a total of 1,823 cases. The weighted 2016-2020 GSS Panel Wave 2 retention rates were 44.9 percent for the 2018 GSS cross-sectional respondents, 38.8 percent for the 2016 GSS cross-sectional respondents, and 40.4 percent overall for the entire 2016-2020 GSS Panel Wave 2 sample.

Since the 2016-2020 GSS Panel Wave 2 attempted to re-interview only the respondents from the 2016 and 2018 GSS rounds, the full panel response rate is the initial round response rate multiplied by the panel retention rate. The full-panel weighted response rate for the 2016 GSS round is the cross-sectional weighted response rate of 61.3 percent multiplied by the 2016-2020 GSS Panel Wave 2 retention rate of 38.8 percent = 23.8 percent. The full-panel weighted response rate for the 2018 GSS round is the cross-sectional weighted response rate of 59.5 percent multiplied by the 2016-2020 GSS Panel Wave 2 retention rate of 44.9 percent = 26.7 percent. We do not attempt to combine the two rounds for the full panel response rate.

Weights

The data presented here are intended to be used with weights that adjust for non-response that may have occurred at the National Frame Area level from 2016 and 2018 to 2020. **The 2016-2020 GSS Panel Wave 2 uses as its frame the 2016 and 2018 survey completes, thus is not intended as an explicitly representative cross-section sample of adults in the U.S. in 2020. A separate cross sectional survey was conducted in 2020 to be representative of the 2020 population.** We recommend using the 2016-2020 GSS Panel to study person-level change resulting from: 1) the passage of time, 2) the COVID-19 pandemic, and 3) the shift from face-to-face (F2F) to web self-administered questionnaire (SAQ) mode.

The 2016-2020 GSS Panel contains several different variables that are useable for weighting and variance estimation, all of which have counterparts in the GSS Cumulative Cross-section. The data include the standard variance stratum (VSTRAT) and variance primary sampling unit (VPSU), which are used to protect against potential inferential disclosure risks. The standard GSS weights, WTSSALL, and WTSSNR, have been modified to work with the 2016-2020 GSS Panel, and are included as WTSSALL_2 and WTSSNR_2. WTSSALL_2 accounts for the sub-sampling of nonrespondents as well as the number of adults in households. WTSSNR_2 also includes an area non-response adjustment based on NFAs. **For most users, we recommend WTSSNR_2.** These weights were built in several steps, detailed here, with some additional tables in Appendix B:

Step 1. We started with the final weight from each cross-sectional round. The variable is WTSSNR in the 2016 and 2018 cross-sectional weight files. There were 2,867 completes in 2016 and 2,348 completes in 2018. These variables were normalized to sum to their sample sizes, so the sum of the 2,867 completes in 2016 is 2,867, and the sum of the 2,348 completes in 2018 is 2,348. Please note that not all 2,867 completes from 2016 were released for the panel.

Step 2. Only some of the 2016 cases were released for fielding in 2020. We excluded 200 of the completed interviews from 2016 because they were used as a pilot for locating. We split the remaining 2,667 completes into five batches and released only the first four for the 2020 panel. This means that 2,146 out of 2,867 (74.85 percent) of the 2016 completes were released for the 2020 panel. Therefore, we applied a subsampling weight adjustment of $2,867/2,146$. For the 2018 completes, all 2,348 were released; therefore, their subsampling weight adjustment is 1.

Step 3. A few panelists were out of the country or deceased, so at this step, these few ineligible cases were given a zero weight. All other cases kept their Step 2 weight.

Step 4. GSS uses an NFA-level nonresponse adjustment. Our first-stage clusters are referred to as National Frame Areas (NFAs), which are counties in rural areas or entire metropolitan statistical areas. We calculated the weighted response rate for each NFA using the calculation in Step 2. The NFA response rates range from 12.84 percent (47 eligibles) to 64.51 percent (38 eligibles).

Importantly, the number of eligible cases ranges from 22 to 238, but the two extremes seem to have enough cases. The Step 2 calculation is divided by the NFA response rate.

Step 5. GSS normalizes the calculation in Step 4 so that the sum of the weights is equal to the number of respondents. However, we believe that analyses of the 2020 panel should be a 50 percent mix of each cohort (2016 and 2018). Therefore, the average normalized weight for the smaller cohort (2016) will be slightly greater than the average normalized weight for the larger cohort (2018). Each cohort has its weight multiplied by a constant so that the sum for the cohort is 911.5 (half of 1,823). These normalized weights are WTSSNR_2 and WTSSALL_2.

Table 5 contains the distribution for the NFA-level response rates among the 4,351 panel eligibles.

Table 5: NFA-Level Response Rates

N	MEAN	STANDARD DEVIATION	MINIMUM	10 TH PERCENTILE	25TH Q1	MEDIAN	75 TH Q3	90TH	MAXIMUM
4,351	41.5%	10.1%	12.8%	28.8%	34.0%	42.0%	47.8%	54.7%	64.5%

HOW TO READ GSS CODEBOOK TABLES

This 2016-2020 GSS Panel codebook presents all data included in the 2016-2020 GSS Panel Release 1, in alphabetical order.

Variables in the 2016-2020 GSS Panel have been appended with either _1a, _1b, or _2. In this panel, Wave 1 is 2016 (_1a) or 2018 (_1b) or wave 2 (2020).

_1a variables contain data from the 2016 GSS

_1b variables contain data from the 2018 GSS

_2 variables contain data from the 2020 GSS

No respondent will have valid responses in all three variables, since panel respondents will have participated in either the 2016 GSS or the 2018 GSS, but not both. Respondents will have valid responses in either _1a and _2, or _1b and _2, but never both _1a and _1b.

Table 6 shows an example of crosstabs found in Appendix A.

Table 6: Example Codebook Table - NATPARK

Table 6 contains seven columns, each with unique information. Column one, Year, shows the year of data collection for the corresponding section of the table. **The GSS Codebook uses Year in the place of the _1a, _1b, and _2 labels for codebook tables.** Column two shows all response options for the item as labels (and with numeric values for unlabeled responses). Column three shows the unweighted frequency for each response. Column four shows the weighted frequency for each response. Column five shows the standard error of the weighted frequency for each response. Column six shows the weighted percentage for each response. Finally, column seven shows the standard error of the weighted percentage for each response.

Each subsection of the table contains responses from one year of the GSS 2016-2020 Panel: Initial Interviews in 2016 and 2018, and follow-up interviews in 2020. The “Total” section of the table sums to more responses than are found in the dataset, due to double-counting 2020 respondents.
